## Product Component Update

### SledWheels

Hook/Saddle Assm. Update

3/25/2020

In our pursuit to provide the highest quality of products to our customers, we maintain an in-depth and continuous testing protocol. Through this process it has come to our attention and understanding that the original SledWheels hook and saddle assembly was comprised of a material formula that did not meet our standards of quality. For that, we have developed a replacement assembly which is 3x stronger than the original blend. These replacement assemblies are available to you at no cost, for shipping or replacement parts. Please review the information below prior to submitting your request for replacement parts.
