

DR_x Beasley's™

Your Detailing Prescription

Application Instructions

1. Make sure surface has been thoroughly cleaned and dried.
2. Focusing on a small section at a time, apply Metal Coat to an applicator and spread evenly across the metal surface, making sure to maintain even coverage.
3. After fully covering that section use a clean, dry microfiber towel to remove excess product.
4. Move on to the next section and repeat the process.

NOTE: Only apply to one section at a time. Wipe down immediately to avoid residue. Before applying, test a small amount in an inconspicuous place to check compatibility with surface.

Bring your life with Dr Beasleys products.
