

# Frequently Asked Questions

At American MFG, a HitchDoc Company, we understand that questions may arise as you install our products.

## **So are you American Manufacturing or HitchDoc?**

At the current time, the name and logo for American Manufacturing will remain the same but will be operated by the HitchDoc team and facilities. The American Manufacturing brands (Eagle Plow, Eagle Winch, Talon Tire Chains, etc.) will also continue to be used.

## **Where are you located?**

We do our manufacturing from raw steel to finished product in Jackson, MN, with only American materials.

## **Is there a way to turn my Eagle Plow Blade without having to do it?**

Yes! Look at the Motion Pacs by KYB.

## **How do I know what kind of blade to get?**

Any Eagle Blade will fit on any Eagle Plow System, we generally recommend the following blade sizes:

50", 54", 60" - ATV

60", 66", 72" - UTV

A good rule of thumb is to measure how wide your machine is and how much power it has to move snow.

## **How do I raise and lower my plow?**

To raise and lower the plow, you will need either a winch or a handlift kit.
