

Sizing Chart

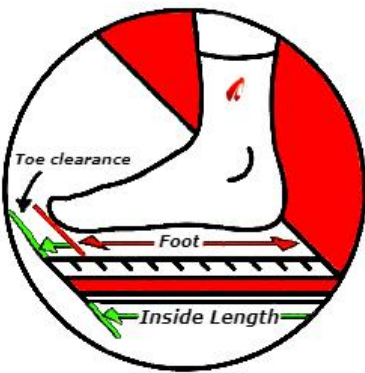

Sizing is easy, order your regular sneaker size, but go up one size if you have big wide feet.

Or, you can follow this sizing method...

Place your heel against a wall and measure out to the end of your big toe.

The boot's **inside length** (listed below) should be **15-20mm longer** than your feet.

This measurement gives you the correct toe clearance for safety and comfort.

95% of our customers receive the correct size first time, but if you find that you need to exchange, please **don't panic** we will work quickly to exchange sizes.
