

VINYL PROTECTIVE FILM TAKES THE ABUSE,

NOT YOUR PAINTED AND PLASTIC SURFACES!

Prevent scuffing or marks on your motorcycle's bodywork or plastics in the areas where Giant Loop soft luggage contacts these surfaces.

Even a single ride can buff the shine off your gloss coat. Take a few minutes now to keep your bike looking like new.

PLEASE READ THESE INSTRUCTIONS CAREFULLY BEFORE YOU BEGIN WORK!

- Clean surface thoroughly to remove residue and oils. On new plastics, use brake cleaner or carburetor cleaner to remove plasticizers from surface - alcohol and household cleaners will not work.
- Work in warm area with warm vinyl sheets. Use hair dryer to warm sheets if needed.
- Use razor blade knife to trim sheet to shape.
- In spray bottle add 1 drop liquid dish soap to 16 ounces of warm water.
- Spray solution onto bike plastic/bodywork and onto both sides of vinyl sheet.
- Place wet vinyl sheet onto plastic/bodywork and float into place.
- Gently squeegee water and bubbles out from under vinyl sheet. Start with fingers, then use a folded piece of this header card to finish.
- Wait 4-6 hours before riding to allow moisture to evaporate. Gently work out any remaining bubbles.

VINYL PROTECTIVE FILM™

PREVENT SCUFFS & SCRATCHES

Protect bodywork and plastics under Giant Loop soft luggage

- Installs in minutes
