

Trail recommendations for snowmobiles with dual runner style ski's

Woody's carbide length recommendations for snowmobiles with dual carbide runner style ski's are identical to our recommendations for single carbide runner style skis. For example, a sled that typically uses a 6" Trail Blazer IV™ runner will also use a 6" Dooly™.

These recommendations hold true for models such as:

- Ski-Doo's Precision Ski (two separate runners per ski)
- Ski-Doo's Pilot Ski (two separate runners per ski)
- Polaris' Sidehiller 2 Ski (two separate runners per ski)
- Polaris Accu-Trak Ski (one dual carbide runner per ski)
- Polaris IQ Ski (two separate runners per ski)
- Arctic Cat Dual Style Runner (one dual carbide runner per ski)
- Woody's Dooly™ (one dual carbide runner per ski)
- Woody's Slim Jim® (one dual carbide runner per ski)

Woody's sells runners two per package for separate runner skis such as Ski-Doo's Precision Ski and Polaris' Sidehiller 2. This allows the rider to customize the length of carbide on each ski.

*Dooly™ and Slim Jim® runners are packaged individually.

Part numbers for these bars are:

Polaris IQ Trak Ski Runner Information

To replace stock runners, check for the number of bolts currently being used on your stock ski. If your stock ski comes with 3 or 4 bolts use the Woody's 1225 runner series, which has 3 bolts. This runner series will also fit the 4 bolt pattern.

If your stock ski comes with 6 bolts use two pair of Woody's 7125 runner series.

This Polaris stock ski needs Woody's 1225 runner series because of the 3 or 4 bolts.

This Polaris stock ski needs Woody's 7125 runner series because of the 6 bolts.

If you are considering other runner options, you may be required to make ski modifications. Please call our Technical Support line.
